SULTAN MUSAEV

Sr. DevOps / SRE Engineer

(864) 986-0215 | sulimusa@gmail.com | linkedin.com/in/sultan-musaev | Chicago, IL, USA

Authorized to work in the U.S. without current or future sponsorship.

SUMMARY

Senior DevOps / Platform / SRE Engineer with 10 years across AWS, Azure, and GCP: cloud infrastructure automation, Infrastructure-as-Code, event-driven distributed systems, microservices, and CI/CD. Spent 4+ years at Broadridge Financial Solutions delivering multi-region disaster recovery, large-scale Kafka event architectures, and Kubernetes platform operations in a regulated financial services environment, preceded by DevOps consulting at Inspire11 and multi-cloud delivery at Slalom Build across insurance, healthcare, automotive, and industrial clients. Led infrastructure initiatives end-to-end and mentored engineers. Built and shipped independent AI-platform projects alongside core infra work (see Independent Projects).

TECHNICAL SKILLS

Cloud: AWS, Azure, GCP
Infrastructure as Code: Terraform, Terraform Enterprise (TFE), CloudFormation
Containers & Orchestration: Kubernetes (EKS, GKE), Docker, Helm, ECS
CI/CD: Jenkins, GitLab CI, GitHub Actions, Azure DevOps, CircleCI, Bitbucket Pipelines
GitOps: ArgoCD, Kustomize
Messaging & Streaming: Confluent Kafka, Amazon MSK, SNS, SQS, EventBridge
AI / ML Tooling: LangChain, LangGraph, RAG pipelines, PydanticAI, AWS Bedrock, Gemini/Vertex AI, agentic coding workflows (Claude Code)
AI Engineering (in progress): OpenAI SDK, Agents SDK (agentic tool-calling), MCP, Evidently & LangWatch (LLM evaluation), Pydantic Logfire & OpenTelemetry (LLM observability)
Config Management: Ansible, Puppet, Chef
Languages: Java, Python, PowerShell, Bash, Groovy, HCL
Databases: PostgreSQL, MySQL, Oracle, RDS, DynamoDB, MongoDB, Redshift, Redis
Monitoring & Observability: Grafana, Prometheus, Nagios, CloudWatch, DataDog, Splunk
Security: IAM, GuardDuty, KMS, IRSA, Prisma Cloud, SentinelOne
Other: VMware PowerCLI, Zerto, Spring Boot, Apache Airflow, MuleSoft, Snowflake

EXPERIENCE

Sr. Site Reliability Engineer, Post-Trade Processing Platform

09/2025 – 07/2026

Broadridge Financial Solutions · *Newark, NJ (Remote)*

- Owned architecture and delivery of 20+ Terraform stacks across primary and DR regions (us-east-1/us-west-2) spanning S3, SQS, EKS, MSK, RDS, Redis, Lambda, SFTP, SSM, PrivateLink, Route53, DynamoDB, and CloudFront.
- Designed and delivered bi-directional cross-region S3 replication and Multi-Region Access Points end-to-end, from planning through launch, enabling automatic DR failover with zero application code changes.
- Led incident response on a production data-integrity incident, restoring service quickly from a clean snapshot, then closing the root cause with a hardened cross-environment promotion gate: a structural fix, not a one-off patch, that eliminated an entire class of deployment-tagging failures.
- Architected a three-tier S3 security boundary for SFTP file exchange (GuardDuty malware scanning, automated quarantine, downstream notification) and built a release automation system (ECR promotion, JIRA ticket extraction, CHANGELOG generation) across 12+ microservices, saving 4–6 hrs/week.
- Led onboarding of multiple financial-institution clients, provisioning 50+ Kafka topics across 4 environments in a single sprint and resolving a cluster capacity constraint blocking production readiness.
- Monitored Kubernetes workloads via DataDog across QA/UAT/Prod to proactively catch CrashLoopBackOff and errored pods; controlled cloud costs by applying capacity-planning rigor to developer-submitted scale-up requests, validating against DataDog/Splunk utilization data before approval.

Stack: *AWS (EKS, S3, SQS, MSK, RDS, Lambda, Transfer Family, SSM, GuardDuty, DynamoDB, CloudFront, S3 MRAP, KMS), Terraform, Kubernetes, Helm, Confluent Kafka, Jenkins, GitLab CI, Java 21, Spring Boot, Docker, Python, Bash, DataDog, Splunk*

DevOps / Infrastructure Automation Lead

04/2025 – 09/2025

Broadridge Financial Solutions · *Newark, NJ (Remote)*

- Led an Infrastructure-as-Code initiative automating end-to-end VM provisioning across 4 global datacenters spanning PROD and QA; owned delivery and mentored 1 mid-level engineer.
- Converted PowerShell automation into Jenkins CI/CD pipelines covering the full VM lifecycle: creation, OS customization, network configuration, application installation, and DR replication setup via Zerto.
- Stepped in as acting PowerShell developer after the primary developer departed, authoring scripts for SQL Server, SSRS, monitoring agents (DataDog, Splunk), and security agents (SentinelOne).

Stack: *PowerShell, VMware PowerCLI, Jenkins (Groovy), JFrog Artifactory, SQL Server, SSRS, Active Directory, Windows Server, Zerto*

Sr. DevOps Engineer, Cloud Data Platform (Revenue Reporting)

11/2021 – 04/2025

Broadridge Financial Solutions · *Newark, NJ (Remote)*

- Owned and delivered the full disaster-recovery solution for an AWS-hosted ETL pipeline (FTP → S3 → Lambda → Glue → Redshift), from design through validated failover across DEV/QA/PROD.
- Defined SLIs, SLOs, and error budgets for the platform, establishing measurable reliability targets and alerting thresholds for the Revenue Reporting pipeline.
- Performed a Terraform upgrade from v0.11 to v0.12, modernizing HCL syntax, dynamic blocks, and variable patterns across the full infrastructure stack.
- Provisioned and managed AWS services including Lambda, AWS Batch, Glue Jobs, Redshift, SNS, SQS, and S3.

  Stack: *AWS (Lambda, Batch, Glue, Redshift, SNS, SQS, S3, Step Functions, Athena), Terraform (v0.11 → v0.12), Apache Airflow, Jenkins, GitLab CI, Chef, Shell scripting, Java*

Sr. DevOps Consultant

01/2021 – 11/2021

Inspire11 · *Chicago, IL*

- Acted as interim Java developer to fix and extend Lambda processing code; contributed to a migration from AWS Step Functions to Apache Airflow, building new DAG modules and provisioning Airflow infrastructure via Terraform.
- Partnered with architects and management to design a roadmap separating high-value clients into dedicated DEV/QA/PROD environments; managed Chef-based config and Jenkins/GitLab CI pipelines.

  Stack: *AWS (Lambda, Batch, S3, ECR, CloudFormation, EKS), Terraform, Python, Docker, Helm, Bitbucket Pipelines, Azure DevOps*

Cloud, DevOps & Security Engineer

03/2019 – 12/2020

Slalom Build · *Chicago, IL*

- Delivered multi-cloud infrastructure across 4 enterprise clients spanning insurance, animal health, automotive, and industrial sectors, plus internal GCP enablement training.
- Insurance: assessed AWS IAM posture using credential reports and Access Analyzer; converted AWS Config rules into Prisma Cloud policies.
- Animal health: automated a 3-tier web application and data workload (Data Lake Gen2, Data Factory, EventHub, Synapse) on Azure via Terraform Enterprise (TFE).
- Automotive: provisioned Jenkins, EKS, ECR, and Kubernetes; built CI/CD pipelines via Jenkins and Terraform; codified existing infrastructure as code.
- Internal GCP training: deployed GCP services (Compute Engine, GKE, App Engine, databases) and equivalent AWS infrastructure via Terraform; used Cloud Storage, Dataflow, and BigQuery; monitored via Grafana and Prometheus.

  Stack: *AWS, Azure, GCP, Terraform (TFE), Jenkins, Kubernetes (EKS), Docker, Prisma Cloud, BigQuery, Dataflow, Grafana, Prometheus*

DevOps Engineer · Unix Systems Administrator / DBA

09/2016 – 02/2019

Morningstar · *Chicago, IL*

- Led a cross-discipline agile team of DevOps and QA engineers as Scrum Master, running daily standups and sprint planning (01/2018–02/2019).
- Built automated CI build and deployment pipelines using Jenkins, Docker, Maven, Python, and Bash; performed root-cause analysis for production errors; developed reusable Docker images standardizing environment setup across teams.
- Managed AWS IAM users, groups, and permissions; maintained RDS, Route 53, SES, and SNS; built and troubleshot Golden AMIs with Auto Scaling Groups; configured VPCs, subnets, security groups, and ACLs (09/2016–12/2017).

INDEPENDENT PROJECTS

Kubernetes Incident Context & Investigation Assistant

- Designed a PydanticAI investigation workflow with five read-only tools that correlates Kubernetes resource changes and deduplicated logs against Elasticsearch-indexed evidence and runbooks, producing structured reports that separate confirmed observations from hypotheses and flag missing evidence, with every claim backed by a source citation.
- Built the evaluation discipline alongside the system: 22 automated tests across three realistic failure scenarios (database misconfiguration, service routing, bad releases), plus a 30-case synthetic benchmark tracking retrieval quality, investigation latency, and model cost.
- Instrumented the platform end-to-end with monitoring and a user-feedback loop, treating it as an operated service rather than a one-off script.

  Stack: *Python, Kubernetes, Elasticsearch, Loki, FastAPI, PydanticAI, Prometheus, Grafana, Docker*

Flower Store: AI Ordering Assistant

- Delivered an AI ordering assistant for a paying client: LangChain/LangGraph-based conversational order-taking backed by a RAG pipeline over live product and inventory data, deployed on Cloudflare Workers with Stripe-based checkout.

  Stack: *LangChain, LangGraph, RAG, Cloudflare Workers, Stripe*

EDUCATION & CERTIFICATIONS

- B.S. in Finance, Academy of Management and Production
- Network & Computer System Administration, Harry S Truman College
- AWS Certified Solutions Architect (Associate)
- Red Hat Certified Systems Administrator (RHCSA)
- Certified Kubernetes Administrator (CKA, in progress)
